It can use space and bandwidth more efficiently, and simply without things like too much security. This month, we looked at a firefox security extension, an update to a favorite file compression utility, and a tool that turns your computer into a secure repository for electronic messages while you're gone. Each comes as a free trial, and one remains free forever. JavaScript helps you make great use of the Web; but in the wrong hands, it allows the web to make use of you. Dennis O'Reilly of PC World gives solid advice for blocking JavaScript in both Microsoft Internet Explorer and Firefox. Fix Firefox according to its regulations, NoScript, adds a lot of security options it's worth going through them here in more detail. Like any other Mozilla extension, NoScript installs directly into Firefox or Mozilla. It works in the new Mozilla-based Flock browser. It installs a small icon in your browser's status bar; This icon lets you know when you're blocking JavaScript.I specifically likes NoScript's ability to allow you to license a section or block or allow a website to use JavaScript indefinitely or only for that session. NoScript also gives you the option to block not only JavaScript, but Flash and other plug-ins. NoScript is free. You can help cause by donating to software author Giorgio Maone.Many file compression utilities provide a my-way-or-the-highway interface that you can envision in a dictionary as an example for non-intuitive words. WinZip makes file compression easier with new interface options in WinZip Standard 10.0.The classic interface is still as much as longtime WinZip users remember, but new options have sneaked in. The View Styles option displays your files in easy-to-navigate Windows-Explorer seedling view. If you're a fan of wizards, don't despair; it is still here, too, allowing for quick compression and e-mail of files. Of course, the real reason we use zip gadgets at all is to make things smaller. WinZip's new ppmD and Bzip2 compression technology squish files into more compact zips than we've seen in the past. In Data plump times, when many hard drive gigs just don't seem enough, every little byte counts. Note, however, that PPMd compression is new to WinZip 10, so now only other users of the new version of WinZip will be able to extract files created using PPMd. Bzip2 is not quite as good as WinZip 9 can extract (but not create) Bzip2 files and is supported by other file compression utilities. Bottom line: If you're compressing files to send to others, make sure the recipient's zip extension can work with the formats and technologies you're using. WinZip Standard is free to use for 45 days. At the end of this trial period, it costs \$30 to keep the program. If the ability to compress directly to a CD or perform an automatic zip backup seems useful to you, take a look at the \$50 Pro version. , or your screen)—but you may not notice it. In fact, it may drift away, or others may see it before you do. If your co-colleagues can leave secure notes on your PC, you'll be more likely to get them when you get back. Enter the X-Screen Table, turning your PC into a message board that only you can see. When you run the program, your screen will display a simple black screen with a message inviting people to stop to type their name and a message into a form, then click OK to pin notes to your virtual notification board. Every time someone clicks OK, the message fields will be blank and the message tally will increase by a number. When you get back to your desktop, you can see how many messages are left, but you can only view them by entering your password to the on-screen keyboard. The trial version is good for 10 days and works only with the original password (quite clearly). To continue using the program after 10 days and to change your password, sign up for the software for \$15.PC World Senior Associate Editor Andrew Brandt and Senior Downloads Producer Max Green contributed to this story. As many of you know, installing an Android app is a simple, simple process - you open the Play Store, find the software you need, and press that big green Settings button. However, Android apps also take the form of packages installed manually, not through Google's app store. These packages have a . APK file extensions, and their actual use is numerous. For example, one might have offline backups of apps stored as APKs. Even if the app in question is taken from the Play Store (like what happened to Flappy Bird), it can still be installed from the APK file. out, APKs are used when sideloading apps on phones running Android versions are broken down because they don't come with the Play Store client. Think Amazon Kindle Fire or Nokia X phones. get APK from? Although they can be downloaded from the internet, the safest way is to extract Android installation packages directly from the Android device. Keep in mind that the method described here only works for free apps! Paid applications are protected against extraction for obvious reasons. Additionally, apps that download additional data during installation (see #5 images) may be uns usable if installed from the extracted APK. Apps that download additional files after they've been installed will work fine. With that, here's how you turn your own Android apps into APK installation files. On your Android device, open the Play Store and download the apps you need to extract. Download APK Extractor. It is a free and easy to use app. Open the EXTRACTOR APK and tap any app you want to extract. Press long to select multiple apps. APK files will be stored in a folder on the device's memory. (ExtractApks by default.) That's pretty much it! Extracted APKs can be copied to another Android smartphone or tablet and installed with the help of a file manager such as Astro or ES File Explorer. Subscribe to our newsletter! I've downloaded some programs for free and although I've never had serious problems with them, I can't recommend it cons mind unless you're working with a known organization. Research finds too many catastrophic stories of people accidentally downloading malware or viruses, and the truth of the problem is that even with internet searches through McAfee or the like, you simply can't guarantee the safety of your programs. The most important lesson? If you're going to do it, do a thorough backup first. Related broadband article Buddy. Is freeware safe? Discover the free software alternative. 2012.
